IN REPLY
REFER TO: Joint Interoperability Test Command (JTE)

10 Jan 13

MEMORANDUM FOR DISTRIBUTION

SUBJECT: Joint Interoperability Certification of the Amcom Software, Inc. SmartSpeech™, Morale Call Manager, and Automated Directory Attendant System (ADAS) Applications with Release 4.9-0

References: (a) DoD Directive 4630.05, "Interoperability and Supportability of Information Technology (IT) and National Security Systems (NSS)," 5 May 2004
(b) Department of Defense Instruction 8100.04, "DoD Unified Capabilities (UC)," 9 December 2010
(c) through (e), see Enclosure 1

1. References (a) and (b) establish Defense Information Security Agency (DISA) Joint Interoperability Test Command (JITC), as the responsible organization for interoperability test certification.

2. The Amcom Software, Inc. SmartSpeech™ with Release 4.9-0 is hereinafter referred to as the System Under Test (SUT). The SUT meets all of its critical interoperability requirements and is therefore certified for joint use within the Defense Information Systems Network (DISN) as a Customer Premise Equipment (CPE) with any switching system on the Unified Capabilities (UC) Approved Product List (APL) that has a certified Time Division Multiplexing (TDM) interface that corresponds to one of the certified TDM interfaces of the SUT. The SUT met the critical interoperability requirements set forth in Reference (c), using test procedures derived from Reference (d). No other configurations, features, or functions, except those cited within this memorandum, are certified by JITC. This certification expires upon changes that could affect interoperability, but no later than three years from the date of this memorandum.

3. This finding is based on interoperability testing conducted by JITC, review of the vendor's Letters of Compliance (LoC), and DISA Certifying Authority (CA) Recommendation of the Information Assurance (IA) configuration. Interoperability testing was conducted by JITC, Fort Huachuca, Arizona, from 10 through 20 September 2012. Review of the vendor's LoC was completed on 5 September 2012. The DISA CA provided a positive Recommendation on 21 December 2012 based on the security testing completed by DISA-led IA test teams and published in a separate report, Reference (e). The acquiring agency or site will be responsible for the DoD Information Assurance Certification and Accreditation Process (DIACAP) accreditation. Enclosure 2 documents the test results and describes the tested network and system configurations.

4. The interface, Capability Requirement (CR) and Functional Requirement (FR), and component status of the SUT are listed in Tables 1 and 2. The threshold CR/FRs for CPE are

JITC Memo, JTE, Joint Interoperability Certification of the Amcom Software, Inc. SmartSpeech™, Morale Call Manager, and Automated Directory Attendant System (ADAS) Applications with Release 4.9-0

established by Section 5.2.1.2 of Reference (c) and were used to evaluate the interoperability of the SUT. Enclosure 3 provides a detailed list of the interface, capability, and functional requirements.

Table 1. SUT Interface Interoperability Status

Interface	Critical	UCR Reference	Threshold CR/FR (See note.)	Status
10Base-X	No	5.3.2.4.2	1-4	Not Tested
100Base-X	No	5.3.2.4.2	1-4	Not Tested
1000Base-X	No	5.3.2.4.2	1-4	Not Tested
2-Wire Analog (GR-506-CORE)	No	5.3.2.31.4.3.1	1, 2, 4	Certified
T1 ISDN PRI NI 1/2	No	5.3.2.31.4.8	1, 2, 4	Certified
T1 Line Side Loop Start	No	GR-506-CORE	1, 2, 4	Not Tested

NOTE: The annotation of 'required' refers to a high-level requirement category. The applicability of each sub-requirement is provided in Enclosure 3. The system under test does not need to provide conditional interfaces. However, if an interface is provided, it must function according to the specified requirements in order to be certified.

LEGEND:

CR	Capability Requirement	PRI	Primary Rate Interface
FR	Functional Requirement	SUT	System Under Test
GR	Generic Requirement	T1	Digital Transmission Link Level 1 (1.544 Mbps)
ISDN	Integrated Services Digital Network	UCR	Unified Capabilities Requirements

Table 2. SUT CRs and FRs Status

CR/FR ID	Capability/Function	Applicability ¹	UCR Reference	Status
1	Product Interface Requirements			
	Interfaces to LSC	Required	5.3.2.4.2	Met
2	Customer Premise Equipment Requirements			
	MLPP in accordance with requirements listed in section 5.3.2.3.31.3	Conditional	5.2.1.2(1)	Met
	FCC Part 15/Part 68 and ACTA	Required	5.2.1.2(2)	Met
	Auto Answer mode settable to more than the equivalency of 4 ROUTINE rings	Conditional	5.2.1.2(3)	Met
	MLPP precedence call alerting	Conditional	5.2.1.2(4)	Met
	DTMF Outpulsing in accordance with GR-506-CORE (C)	Conditional	5.2.1.2(5)	Met
	If configuration management and/or fault management are/is provided by the CPE device so that it can be managed by the ADIMSS or other management systems, the management information shall be provided by one or more serial or Ethernet interfaces.	Conditional	5.2.1.2(8)	Met
	Calls above ROUTINE placed to the SUT shall divert to a designated Directory Number.	Required	5.3.2.2.2.1.2.5	Met
3	IPv6 Requirements			
	If CPE has an IP interface, the CPE must be IPv6 capable. Use guidance in Table 5.3.5-4 for NA/SS	Required	5.3.5	Not Tested ²
4	Information Assurance			
	Security	Required	5.4	Met ³

Table 2. SUT CRs and FRs Status (continued)

NOTES:			
1. The annotation of 'required' refers to a high-level requirement category. The applicability of each sub-requirement is provided in Enclosure 3. The system under test does not need to provide features or capabilities defined by conditional requirements. However, if a capability is provided, it must function according to the specified requirements in order to be certified for that capability.			
2. The SUT does not offer an IP interface; therefore, this requirement does not apply.			
3. Information assurance testing is accomplished via DISA-led Information Assurance test teams and published in a separate report, Reference (e).			
LEGEND:

5. No detailed test report was developed in accordance with the Program Manager's request. JITC distributes interoperability information via the JITC Electronic Report Distribution (ERD) system, which uses Unclassified-But-Sensitive Internet Protocol Router Network (NIPRNet) e-mail. More comprehensive interoperability status information is available via the JITC System Tracking Program (STP). The STP is accessible by .mil/gov users on the NIPRNet at <https://stp.fhu.disa.mil>. Test reports, lessons learned, and related testing documents and references are on the JITC Joint Interoperability Tool (JIT) at <http://jit.fhu.disa.mil> (NIPRNet). Information related to Defense Switched Network (DSN) testing is on the Telecom Switched Services Interoperability (TSSI) website at <http://jitc.fhu.disa.mil/tssi>. Due to the sensitivity of the information, the Information Assurance Accreditation Package (IAAP) that contains the approved configuration and deployment guide must be requested directly through government civilian or uniformed military personnel from the Unified Capabilities Certification Office (UCCO), e-mail: disa.meade.ns.list.unified-capabilities-certification-office@mail.mil.

6. The JITC point of contact is Capt Stéphane Arsenault, DSN 879-5269, commercial (520) 538-5269, FAX DSN 879-4347, or e-mail to Stephane.P.Arsenault.fm@mail.mil. JITC's mailing address is P.O. Box 12798, Fort Huachuca, AZ 85670-2798. The tracking number for the SUT is 1214403.

CERTIFICATION TESTING SUMMARY

1. SYSTEM TITLE. Amcom Software, Inc. SmartSpeech™, Morale Call Manager, and Automated Directory Attendant System (ADAS) Applications with Release 4.9-0; hereinafter referred to as the System Under Test (SUT).

2. SPONSOR. Headquarters United States Army Information Systems Engineering Command (HQUSAISEC), Mr. Steven Pursell, USAISEC ELIE-ISE-ES, Building 53301, Fort Huachuca, Arizona 85613, e-mail: steven.d.pursell.civ@mail.mil.

3. SYSTEM POC. Mr. Robert Erdman, 10400 Yellow Circle Drive, Suite 100, Eden Prairie, Minnesota, 55343, e-mail: berdman@amcomsoft.com.

4. TESTER. Joint Interoperability Test Command (JITC), Fort Huachuca, Arizona.

5. SYSTEM DESCRIPTION. The Amcom Software, Inc. Smart Speech Morale Call system is an add-on to Smart Center and uses information from the Smart Center database to connect a name spoken by a caller to a phone number in the database enabling callers to reach people and departments using voice recognition technology. Directory Lookup and Morale Call applications enable organizations to process a majority of routine phone requests including directory assistance, messaging, Health, Welfare & Morale calls and paging independent of a live operator. These applications are designed to handle high call volumes and automate directory information. Smart Speech can be integrated with existing call center applications, using a single database for combined operator, web, and speech-enabled directory functions. The Amcom Software, Inc. Smart Speech Morale Call system connects to Time Division Multiplexing (TDM) telephony systems via two-wire analog, or Digital Transmission Link Level 1 (T1) Integrated Services Digital Network (ISDN) National ISDN 2 (NI2) Primary Rate Interface (PRI) telephone connections. The components under test include the AmcomDB, AmcomRS, AmcomSB (optional), and the Vormetric Hardware Security Manager.

AmcomDB: This is the primary database, which houses the database for directory assistance, messaging, and paging independent of a live operator. The system provides the HyperText Transfer Protocol Secure (HTTPS) web-based user access for maintaining the contact database as well as directory assistance, messaging, and paging independent of a live operator. Application services provided by the system are as follows:

- Smart Center provides authorized users administrative functions to manage the data that the Amcom applications utilize for their services.
- e.Notify provides authorized users administrative functions to create emergency notification templates for use in communications delivery of important information to a group of recipients.
- Smart Web provides authorized user access to designated directory information about local resources such as a location's published telephone number.

- ezNotify provides authorized user level access to initiate e.Notify pre-built notification events.
- Scheduler provides authorized user level access to schedule e.Notify pre-built notification events for automatic activation at a future time.

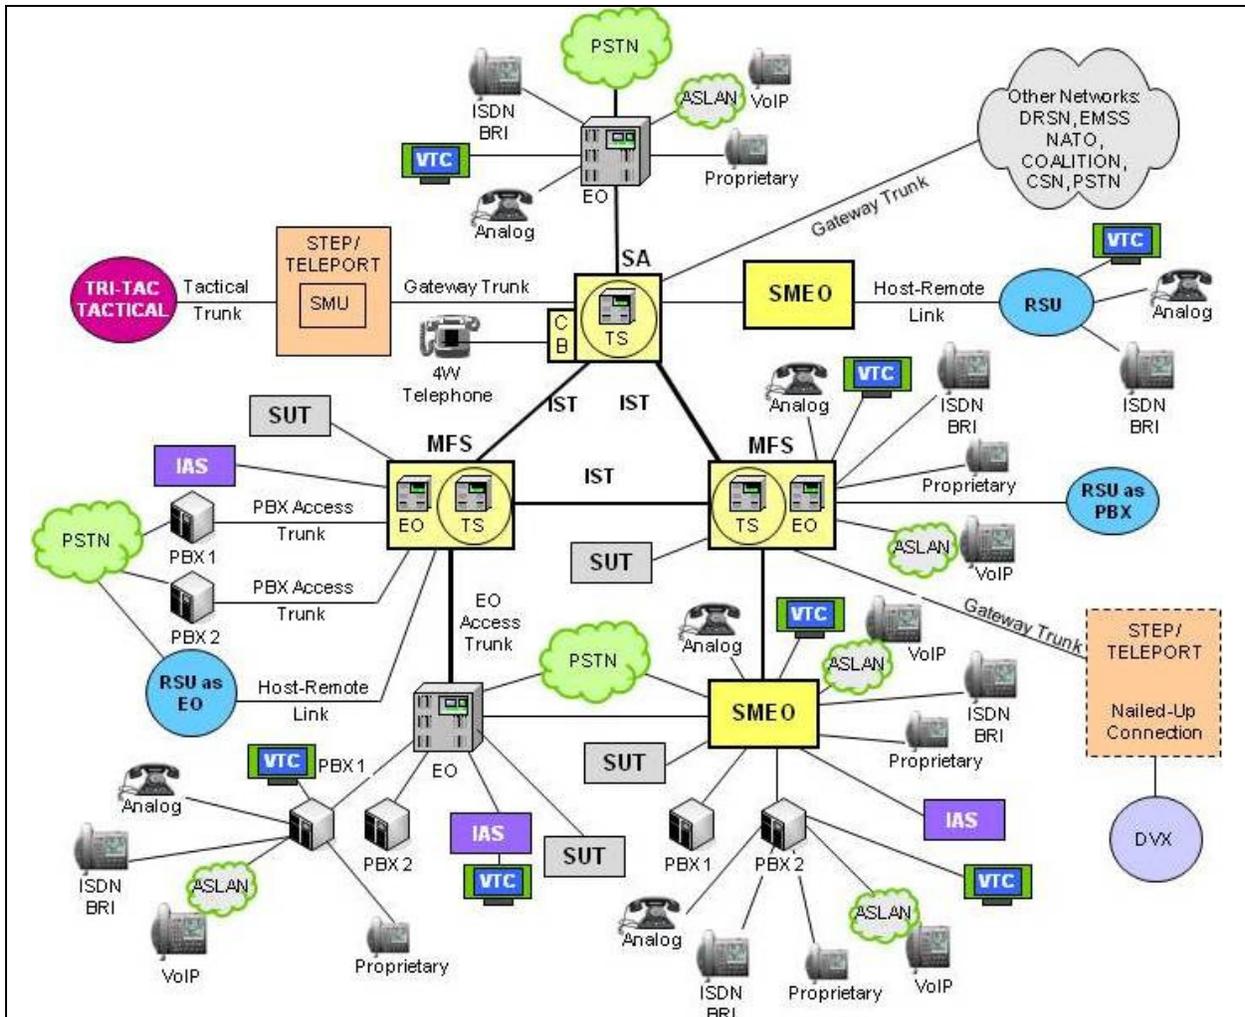

AmcomRS: The Smart Speech Server is housed on a Public Key Infrastructure (PKI)-enabled Windows 2008R2 system and contains Dialogic telephony boards used to processes inbound and outbound Directory and Morale phone calls providing automated processing of telephony activities.

AmcomSB (optional): The failover Database Server provides an automated copy of the AmcomDB primary database to allow for Business Continuity and Disaster Recovery (BCDR) functionality if the AmcomDB system becomes nonoperational. This optional server provides the same functionality of the primary database, AmcomDB.

Vormetric Hardware Security Manager: The Vormetric appliance manages the encryption of the AmcomDB contact database information and maintains the encryption keys, access controls and configuration information.

The Amcom servers are managed directly via an attached Keyboard, Video monitor and Mouse or remotely through a site-provided management workstation.

6. OPERATIONAL ARCHITECTURE. Figure 2-1 depicts the Defense Information Systems Network (DISN) Unified Capabilities notional operational architecture that the SUT may be used in.

7. INTEROPERABILITY REQUIREMENTS. The interface, Capability Requirements (CR) and Functional Requirements (FR), and other requirements for Customer Premise Equipments (CPEs) are established by Section 5.2.1.2 of Reference (c).

7.1 Interfaces. The SUT uses the interfaces shown in Table 2-1 to connect to the Global Information Grid network. This table shows the physical interfaces supported by the SUT and the associated standards.

Table 2-1. CPE Interface Requirements

Interface	Critical	UCR Reference	Criteria (See note.)																								
10Base-X	No	5.3.2.4.2	Support minimum threshold CRs/FRs (1-3) and meet interface criteria for IEEE 802.3i.																								
100Base-X	No	5.3.2.4.2	Support minimum threshold CRs/FRs (1-3) and meet interface criteria for IEEE802.3u.																								
1000Base-X	No	5.3.2.4.2	Support minimum threshold CRs/FRs (1-3) and meet interface criteria for IEEE 802.3z or IEEE 802.3ab.																								
2-Wire Analog (GR-506-CORE)	No	5.3.2.31.4.3.1	Support minimum threshold CRs/FRs (1,2,4)																								
T1 ISDN PRI NI 1/2	No	5.3.2.31.4.8	Support minimum threshold CRs/FRs (1,2,4)																								
T1 Line Side Loop Start	No	GR-506-CORE	Support minimum threshold CRs/FRs (1,2,4)

7.2 CR and FR. CPEs have required and conditional features and capabilities that are established by Section 5.2.1 of the Unified Capabilities Requirements (UCR). The SUT does not need to provide features or capabilities defined by non-critical (conditional) requirements. If they are provided, they must function according to the specified requirements in order to be certified for that capability. The SUT's features and capabilities and its aggregated requirements in accordance with (IAW) the UCR CPE requirements are listed in Table 2-2. Detailed CR/FR requirements are provided in Table 3-1 of Enclosure 3.

8. TEST NETWORK DESCRIPTION. The SUT was tested at JITC, Fort Huachuca, Arizona in a manner and configuration similar to that of a notional operational environment. Testing of the system’s required functions and features was conducted using the test configuration depicted in Figure 2-2.

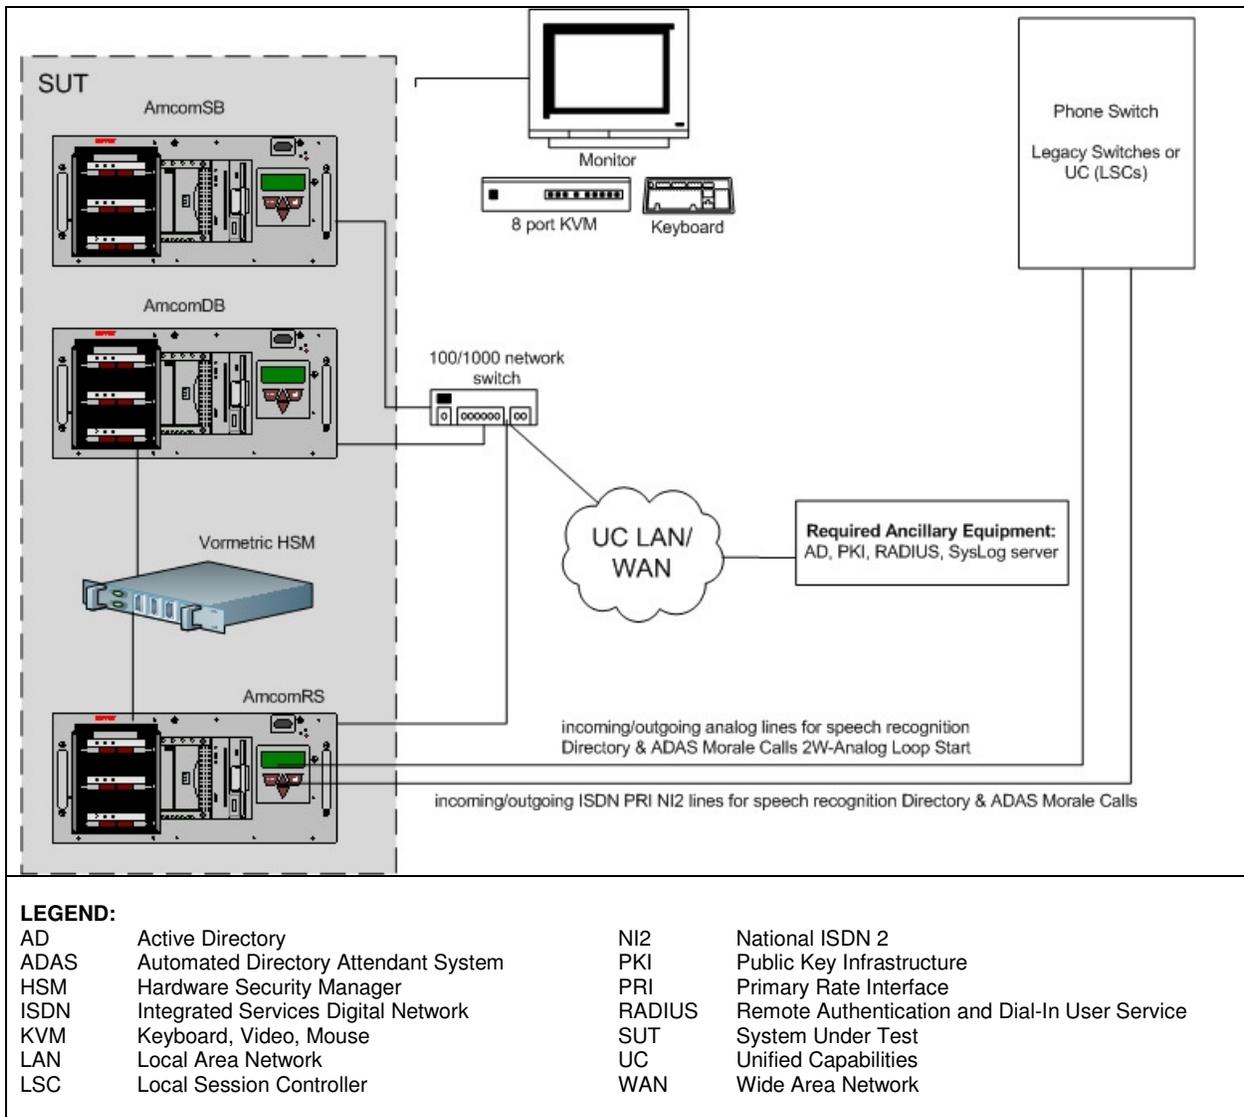

Figure 2-2. SUT Test Configuration

9. SYSTEM CONFIGURATIONS. Table 2-4 provides the system configurations and hardware and software components tested with the SUT. The SUT was tested in an operationally realistic environment to determine its interoperability capability with Defense Switched Network (DSN) switches noted in Table 2-4. The SUT is certified with any switching system on the Unified Capabilities (UC) Approved Product List (APL) that has a certified TDM interface that corresponds to one of the certified TDM interfaces of the SUT.

Table 2-4. Tested System Configurations

System Name	Software Release

10. TESTING LIMITATIONS. None.

11. INTEROPERABILITY EVALUATION RESULTS. The SUT meets the critical interoperability requirements for a CPE in accordance with UCR 2008, Change 3, section 5.2.1.2, and is certified for joint use with other network infrastructure Assured Services Local Area Network products listed on the UC APL. Additional discussion regarding specific testing results is located in subsequent paragraphs.

11.1 Interfaces. The interface status of the SUT is provided in Table 2-5.

Table 2-5. SUT Interface Interoperability Status

Interface	Critical	UCR Reference	Threshold CR/FR (See note.)	Status
10Base-X	No	5.3.2.4.2	1-4	Not Tested
100Base-X	No	5.3.2.4.2	1-4	Not Tested
1000Base-X	No	5.3.2.4.2	1-4	Not Tested
2-Wire Analog (GR-506-CORE)	No	5.3.2.31.4.3.1	1, 2, 4	Certified
T1 ISDN PRI NI 1/2	No	5.3.2.31.4.8	1, 2, 4	Certified
T1 Line Side Loop Start	No	GR-506-CORE	1, 2, 4	Not Tested

NOTE: The annotation of 'required' refers to a high-level requirement category. The applicability of each sub-requirement is provided in Enclosure 3. The system under test does not need to provide conditional interfaces. However, if an interface is provided, it must function according to the specified requirements in order to be certified.

11.2 CR and FR. The SUT CR and FR status is depicted in Table 2-6. Detailed CR/FR requirements are provided in Enclosure 3, Table 3-1.

Table 2-6. SUT CR and FR Status

CR/FR ID	Capability/Function	Applicability ¹	UCR Reference	Status
1	Product Interface Requirements			
	Interfaces to LSC	Required	5.3.2.4.2	Met
2	Customer Premise Equipment Requirements			
	MLPP in accordance with requirements listed in section 5.3.2.3.31.3	Conditional	5.2.1.2(1)	Met
	FCC Part 15/Part 68 and ACTA	Required	5.2.1.2(2)	Met
	Auto Answer mode settable to more than the equivalency of 4 ROUTINE rings	Conditional	5.2.1.2(3)	Met
	MLPP precedence call alerting	Conditional	5.2.1.2(4)	Met
	DTMF Outpulsing in accordance with GR-506-CORE (C)	Conditional	5.2.1.2(5)	Met
	If configuration management and/or fault management are/is provided by the CPE device so that it can be managed by the ADIMSS or other management systems, the management information shall be provided by one or more serial or Ethernet interfaces.	Conditional	5.2.1.2(8)	Met
	Calls above ROUTINE placed to the SUT shall divert to a designated Directory Number.	Required	5.3.2.2.2.1.2.5	Met
3	IPv6 Requirements			
	If CPE has an IP interface, the CPE must be IPv6 capable. Use guidance in Table 5.3.5-4 for NA/SS	Required	5.3.5	Not Tested ²
4	Information Assurance			
	Security	Required	5.4	Met ³

NOTES:

- The annotation of 'required' refers to a high-level requirement category. The applicability of each sub-requirement is provided in Enclosure 3. The system under test does not need to provide features or capabilities defined by conditional requirements. However, if a capability is provided, it must function according to the specified requirements in order to be certified for that capability.
- The SUT does not offer an IP interface; therefore, this requirement does not apply.
- Information assurance testing is accomplished via DISA-led Information Assurance test teams and published in a separate report, Reference (e).

a. Product Interface Requirements. The UCR 2008, Change 3, section 5.3.2.4.2, states the physical interfaces between an LSC and its appliances shall be a 10/100/1000BaseT interfaces. The SUT interface shall support auto-negotiation even when the Institute of Electrical and Electronics Engineers (IEEE) 802.3 standard has it defined as optional. This applies to 10/100/1000-T Ethernet standards; i.e., IEEE, Ethernet Standard 802.3, 1993; or IEEE, Fast Ethernet Standard 802.3u, 1995; and IEEE, Gigabit Ethernet Standard 802.3ab, 1999. The SUT does not offer an IP interface to the DISN; therefore, this requirement does not apply. The SUT connects to the DISN switches through either a 2-wire analog or T1 ISDN PRI NI 2 interface.

b. CPE Requirements

(1) The UCR 2008, Change 3, paragraph 5.2.1.2(1), states that all Customer Premise Equipment (CPE) devices that support Multilevel Precedence and Preemption (MLPP) shall do so in accordance with the requirements listed in Section 5.3.2.31.3, and shall not affect the DSN interface features and functions associated with line supervision and control. The SUT, as a CPE, is required to divert all precedence calls above ROUTINE placed to the CPE to a designated directory number (DN) in accordance with UCR 2008, Change 3, paragraph 5.3.2.2.1.2.5. The SUT met this requirement with testing by routing all calls above ROUTINE to an alternate DN.

(2) The UCR 2008, Change 3, paragraph 5.2.1.2(2), states that all DSN CPE, as a minimum, must meet the requirements of Part 15 and Part 68 of the Federal Communications Commission (FCC) Rules and Regulations and the Administrative Council for Terminal Attachments (ACTA). The SUT met this requirement with the vendor's Letter of Compliance (LoC).

(3) The UCR 2008, Change 3, paragraph 5.2.1.2(3), states that a device(s) that supports autoanswer shall have an autoanswer mode feature allowing the autoanswer mode to be set to a time more than the equivalency of four ROUTINE precedence ring intervals in accordance with Section 5.3.2.31.3, before "answer" supervision is provided. The SUT met this requirement with testing. The SUT has the ability to adjust the auto-answer between 15-45 seconds.

(4) The UCR 2008, Change 3, paragraph 5.2.1.2(4), states that devices that are required to support precedence calls above ROUTINE precedence, shall respond properly to an incoming alerting (ringing) precedence call cadence as described in UCR, section 5.3.2.6.1.1.1. This is a conditional requirement and is supported by the SUT. The SUT diverts all calls above ROUTINE to a designated DN.

(5) The UCR 2008, Change 3, paragraph 5.2.1.2(5), states that a device(s) that can “out dial” Dual Tone Multi-Frequency (DTMF) and/or Dial Pulse (DP) digits (automatic and/or manual) shall comply with the requirements as specified in Telcordia Technologies GR-506-CORE, *LSSGR: Signaling for Analog Interfaces*, Issue 1, June 1996, paragraph 10 and be capable of outpulsing and interpretation of DTMF digits on outgoing or two-way trunks as specified in Telcordia Technologies GR-506-CORE, *LSSGR: Signaling for Analog Interfaces*, Issue 1, June 1996, paragraph 15, and Table 5.2.1.2-1. This requirement was met by the SUT with testing and vendor’s LoC. The SUT does not support DP.

(6) The UCR 2008, Change 3, paragraph 5.2.1.2(8), states that if Configuration Management and/or Fault Management are/is provided by the CPE device so that it can be managed by the Advanced DSN Integrated Management Support System (ADIMSS) or other management systems, then the management information shall be provided by one or more of the following serial or Ethernet interfaces:

(a) Serial interfaces shall be in accordance with one of the following standards:

- International Telecommunication Union - Telecommunication Standardization Sector (ITU-T) Recommendation V.35
- Telecommunications Industry Association (TIA-232-F)
- Electronic Industries Alliance (EIA)-449-1
- TIA-530-A

(b) Ethernet interfaces shall be in accordance with IEEE 802.3-2002.

The SUT met this requirement. The SUT was tested using a directly-connected KVM using an Ethernet interface. The SUT can also be managed with a site-provided workstation using an Ethernet interface to the remote management terminal.

(7) Internet Protocol version 6 (IPv6). The UCR 2008, Change 3, section 5.3.5, states that if a CPE has an Internet Protocol (IP) interface, the CPE must be IPv6-capable in accordance with the guidance in Table 5.3.5-4 for NA/SS. The SUT does not offer an IP interface other than for management; therefore, this requirement does not apply.

11.3 Information Assurance. Security is tested by DISA-led Information Assurance test teams and published in a separate report, Reference (e).

11.4 Other. None

12. TEST AND ANALYSIS REPORT. No detailed test report was developed in accordance with the Program Manager's request. JITC distributes interoperability information via the JITC Electronic Report Distribution (ERD) system, which uses Unclassified-But-Sensitive Internet Protocol Router Network (NIPRNet) e-mail. More comprehensive interoperability status information is available via the JITC System Tracking Program (STP). The STP is accessible by .mil/gov users on the NIPRNet at <https://stp.fhu.disa.mil>. Test reports, lessons learned, and related testing documents and references are on the JITC Joint Interoperability Tool (JIT) at <http://jit.fhu.disa.mil> (NIPRNet). Information related to DSN testing is on the Telecom Switched Services Interoperability (TSSI) website at <http://jitc.fhu.disa.mil/tssi>. Due to the sensitivity of the information, the Information Assurance Accreditation Package (IAAP) that contains the approved configuration and deployment guide must be requested directly through government civilian or uniformed military personnel from the Unified Capabilities Certification Office (UCCO), e-mail: disa.meade.ns.list.unified-capabilities-certification-office@mail.mil.

SYSTEM FUNCTIONAL AND CAPABILITY REQUIREMENTS

The Customer Premises Equipment have required and conditional features and capabilities that are established by Section 5.2.1.2 of the Unified Capabilities Requirements (UCR) 2008, Change 3. The System Under Test (SUT) need not provide conditional requirements. If they are provided, they must function according to the specified requirements in order to be certified for that capability. The detailed Functional Requirements (FR) and Capability Requirements (CR) for Customer Premises Equipment are listed in Table 3-1. Detailed Information Assurance (IA) requirements are included in Reference (e) and are not listed below.

Table 3-1. Customer Premises Equipment Capability/Functional Requirements

ID	Requirement	UCR Reference	Required or Conditional
1	All CPE devices that support MLPP shall do so in accordance with the requirements listed in Section 5.3.2.31.3, Multilevel Precedence and Preemption, and shall not affect the DSN interface features and functions associated with line supervision and control.	5.2.1.2(1)	C
2	All DSN CPE, as a minimum, must meet the requirements of Part 15 and Part 68 of the FCC Rules and Regulations, and the Administrative Council for Terminal Attachments (ACTA).	5.2.1.2(2)	R
3	A device(s) that supports autoanswer shall have an "autoanswer" mode feature allowing the autoanswer mode to be set to a "time" more than the equivalency of four ROUTINE precedence ring intervals in accordance with Section 5.3.2.31.3, Multilevel Precedence and Preemption, before "answer" supervision is provided	5.2.1.2(3)	C
4	Devices that are required to support precedence calls above ROUTINE precedence shall respond properly to an incoming alerting (ringing) precedence call cadence as described in Section 5.3.2.6.1.1.1, UC Ringing Tones, Cadences, and Information Signals.	5.2.1.2(4)	C
5	A device(s) that can "out dial" DTMF and/or DP digits (automatic and/or manual) shall comply with the requirements as specified in Telcordia Technologies GR-506-CORE, LSSGR: Signaling for Analog Interfaces, Issue 1, June 1996, paragraph 10 and be capable of outputting and interpretation of DTMF digits on outgoing or two-way trunks as specified in Telcordia Technologies GR-506-CORE, LSSGR: Signaling for Analog Interfaces, Issue 1, June 1996, paragraph 15, and Table 5.2.1.2-1.	5.2.1.2(5)	C
6	Modems and facsimile machines shall be compatible with ITU and Telcordia standards, as applicable	5.2.1.2(6)	C
7	Facsimile devices, as a minimum, shall meet the requirements in accordance with applicable DISR standards.	5.2.1.2(7)	C
8	If Configuration Management and/or Fault Management are/is provided by the CPE device so that it can be managed by the ADIMSS or other management systems, then the management information shall be provided by one or more of the following serial or Ethernet interfaces: a. Serial interfaces shall be in accordance with one of the following standards: (1) ITU-T Recommendation V.35 (2) TIA-232-F (3) EIA-449-1 (4) TIA-530-A b. Ethernet interfaces shall be in accordance with IEEE 802.3-2002.	5.2.1.2(8)	C
9	As a minimum, the 911 and the E911 (tandem) emergency service shall have the capability to "hold" the originating subscriber or caller from releasing the call via the switch supervision interaction for line and trunk control by the "called-party" feature, in accordance with Telcordia Technologies GR-529-CORE. Additionally, the FCC regulations regarding 911 and E911 must be considered.	5.2.1.2(9)	C
10	The Customer Premises Equipment shall meet all of the IPv6 protocol requirements for NA/SS products in Section 5.3.5, IPv6 Requirements, including the requirements in Table 5.3.5-4, UC Network Appliances and Simple Servers (NA/SS).	5.3.5	R
11	Customer Premises Equipment shall meet the Information Assurance requirements of all applicable DISA STIGs.	5.4	R
